Shengyuan Cai

Email: Bert.cai.sdu@gmail.com
University: Southern University of Science and Technology (SUSTech)
Department: Department of Biomedical Engineering
Address: Room 541, Engineering Building, Shenzhen 518055, P.R. China

EDUCATION

Imperial College London   London, UK

Mres in Neurotechnology Researcher Supervisor, Dr. Simon Schultz   *Sep. 2023 – Sep.2024*

- Relevant Projects: Graph-theoretic analysis of memory encoding and recall with application to dementia.

Shandong University   Shandong, China

B.E in Electrical and Information Engineering, Innovation Key Class   *Sep. 2018 – Jun.2022*

- Cumulative GPA: 86.49/100 Technical GPA: 89.01/100
- Relevant Course:
  Mind Introductory on Cognitive Science, Introduction to EECS I (Ref. MIT OCW 6.01), Linear Algebra, Probability Theory and Mathematical Statistics, Machine learning, pattern recognition and deep learning, Digital signal processing, Digital image processing, Digitalelectronic technology, Python and Computational Biology.

Peking University   Beijing, China

Summer school: FPGA design flow based on RSIC-V processor (Score:99/100)   *Jul. 2020 – Aug.2020*

RESEARCH INTEREST

- Representation learning, Computational neurobehavior, Neural Relational Inference

RESEARCH EXPERIENCE IN BRAIN SCIENCE

Inferring whole effective connectivity in the Infant Human Brain and the Associated Developmental Trends

Researcher Supervisor, Dr. Quanying Liu (Southern University of Science and Technology)   *Feb 2022 – Aug 2023*

- Led the team through the process of scientific hypothesis, comparison experiments, and paper writing
- Modeling neural perturbational inference method for infant human brain
- Finding effective connectivity in the non-linear information flow of asynchronous fMRI data, and analyzing brain heterogenous development to detect functional injury in preterms and terms
- Understanding the clinical implications and pathophysiological basis of aberrant network development

Inferring the relationship between neural activity and episodic behavior under the influence of sepsis

Researcher Supervisor, Dr. Pengfei Wei, Dr. Furong Ju (Chinese Academy of Sciences)   *Sep 2021 – Jan 2022*

- Constructed the behavioral map of strain-specific mice for quantitative evaluation learning
- Developed an instance segmentation and dynamic tracking model for animals, and constructed an unsupervised hierarchical clustering algorithm for the refinement of social behavioral mapping of mice
- Analyzed vivo two-photon imaging of calcium influx in the secondary motor cortex, combined it with the theory of mouse behavioral structure, and finally explained the effect of altered neural spine patterns in the primary motor cortex on episodic behavior in the presence of spinal cord injury

Implementation of brain-computer interface algorithm with different distraction paradigms

Leader Supervisor, Dr. Qiang Wu, Dr. Ju Liu, Dr. Yu Zhang (Lehigh University)   *Aug 2020 – Aug 2021*

- Led the team through the process of algorithm design, comparison experiments and paper writing
- Analyzed graph of scalp Electroencephalogram (EEG) based on sensors, and mainly realized the functional screening of visual evoked potentials and the visualization of real-time process
- Designed a graph convolutional neural network with the self-attention mechanism for graph feature analysis
- Solved the problem of adaptive feature extraction effectively, thereby enabling the interchannel structures of active brain regions under different distraction themes

Differential study of social dysfunction in mice under transcranial direct current stimulation (TDCS) stimulation
Undergraduate Researcher Supervisor, Dr. Qiang Wu   *Jun 2020 – Sep 2020*
- Designed and implemented a multi-channel TDCS stimulation system
- Pinpointed specific differences from the apparent behavior level to explore the effect of TDCS on the social interaction of mice, and then studied the internal mechanism of the neural loops

PUBLICATIONS

Cai, S., Li, H., Wu, Q., Liu, J., Zhang, Y. (2022). Motor imagery decoding in the presence of distraction using graph sequence neural networks. *IEEE Transactions on Neural Systems and Rehabilitation Engineering, 30, 1716-1726.* [paper]

WORKING PAPERS

(In revision) **Cai, S.**, Luo, Z., Ye, Z., Liu, Q. (2023). Inferring whole effective connectivity in the Infant Human Brain and the Associated Developmental Trends.

(In revision) Han, Y., Chen, K., Wang, Y., Liu, W., Wang, X., Liao, J., Huang, Y., Han, C., Huang, K., Zhang, J., **Cai, S.**, Wang, Z., Wu, Y., Gao, G., Wang, N., Li, J., Song, Y., Li, J., Wang, G., Wang, L., Zhang, Y., Wei, P. (2023). Social Behavior Atlas: A computational framework for tracking and mapping 3D close interactions of free-moving animals. *BioRiv / Second revision in Nature Machine Intelligence* [paper]

(In revision) Ju, F., Jian, W., Han, Y., Huang, T., Ke, J., Liu, Z., **Cai, S.**, Liu, N., Wang L., Wei, P. (2022). Long-term two-photon imaging of spinal cord in freely behaving mice. *BioRiv* [paper]

WORK AND COMPETITION EXPERIENCE

Neuromatch [Link]
Supervisor, Dr. Helena Hartmann (University Hospital Essen)   *Jul 2021 – Aug 2021*
- Studied traditional and emerging computational neuroscience tools, on modeling choices, model creation, model evaluation, and understanding of how such models relate to biological questions
- Utilized the (IBL-behavior dataset) for similarity analysis and representing decision factors, including combined generalized linear-hidden Markov models (GLM - HMM) and tensor construction using Pytorch.

Chinese Computational Psychiatry Modeling Competition [Link]
Supervisor, Dr. Mingbo Cai (University of Tokyo)   *Jul 2021 – Aug 2021*
- Designed a diagnostic model based on reinforcement learning to assess anxiety level in clinical situations
- Completed a model to evaluate anxiety levels through decision conversion rates, which basically realized the pathologic evaluation based on questionnaire
- Ranked third place out of ten teams in the seven-day hack challenge with six team members

SKILLS

- Language, Mandarin (native), English (proficient).
- Computer Skills, C/C++, Python, MATLAB, C, Linux, Pytorch, Tensorflow, CUDA, Microprocessors.
- Neuroscience Skills, Nilearn, NetworkX, NEST, Vivo two-photon imaging technique, DIPY, Brainpy

SCHOLARSHIPS AWARDS

- Outstanding undergraduate thesis in Shandong University (top 1%) (June 2022)
- Poster presentation in the 3rd International Workshop on Neural Engineering and Rehabilitation (May 2022)
- China Ministry of Education College Student Research Project Fund. (top 3%) (November 2021)
- Excellent Student of Innovation and Entrepreneurship in Shandong University (top 5%) (November 2021)
- Research Scholarship in Shandong University (top 5%) (November 2021)
- Merit student of the winter school in neuroscience (Chinese Institute for Brain Research Beijing). (top 10%) (2021)
- Outstanding College Student of Innovation and Entrepreneurship Award in Qingdao (top 10%) (November 2020)
